

AGree DISCUSSION SERIES

Blockchain Applications for Agriculture

Blockchain has become a hot topic – but what is it exactly and how might it support more efficient and transparent supply chains? How is it being used today, and what is the potential to leverage blockchain to improve profitability and efficiency for farmers of all sizes? What are the governance and policy implications?

This discussion will explore these questions and more. Panelists will provide a "blockchain 101" overview and discuss the implications of distributed ledger technology for food and agriculture across the United States.
